SYSTEMS AND PROCEDURES JOURNAL

ANNUAL INDEX OF ARTICLES FOR 1963

January–February

12 **Controlling Systems Staff Performance**
The very circumstances that make the exercise of control over the systems staff difficult also increase the need for it. Control should be exercised over the work undertaken, progress of each project, and results achieved.
Eugene J. Revolon

18 **Automation, Economic Growth And Buncombe**
Just how has automation affected the job opportunities for clerical workers? The author dispels some myths that have evolved. He replaces them with a description of the "realities."
Herbert W. Robinson

24 **Systems Man—Architect Or Journeyman**
The answers to certain simple questions will tell whether or not you are focusing on the housekeeping aspects of the systems function or on the dynamic, profit-making facets.
Richard F. Neuschel

28 **Management's Captive Consultants**
Who can management turn to when a problem is beyond the realm of its own experience or training? Who can it look to for an objective approach? Many firms are increasingly looking to a group of men—a brain trust—that the author refers to as management's captive consultants.
John T. Leslie

34 **The Vital Role Of Manuals**
In spite of many companies' half-hearted attempts at them, manual programs should be a basic and unifying force in any systems efforts. The author emphasizes the values, uses, structure needed, and human relations aspects of a sound manuals program.
Douglas B. Hoyt

40 **An Integrated Management Information System . . .**
. . . must have a general specification, and the time is now ripe to set it down; to synthesize, from the many separate thoughts given to the subject, something which might serve as a reference point for systems designers.
John Hockman

March–April

12 **Structure For Operations And/Or Administration**
Is the use of two organization charts an inevitable "next" in the evolution of business management?
F. C. Gosewisch

18 **Man—The Gray Box**
Unlike the machine system, or black box, man is destined to remain imperfect, unpredictable, and unreliable. There will always be a little space between his ideals and his achievements.
Gibbs Myers

24 **With The Masters: Frederick W. Taylor**
The "father of scientific management" rose to the challenge of his era to provide the basic framework for modern-day management philosophies and practices.

34 **The Positive In The Negative**
As advantageous as microfilm is, there are certain things about it which should be approached cautiously.
James L. Smiley

37 **System Design For Operating Management**
The analyst must be prepared to present his knowledge in the form of a basic management pattern.
James C. Reasman

May–June

12 **Don't Do It Yourself**
Business has converted to a service economy through the "don't-do-it-yourself" approach. Now this same approach, involving the use of outside service specialists, has begun to stem the tide of the ever-growing office.
Emmett Leahy

16 **Authority Is What You Make It**
The oft-repeated view that the systems man does not have a mandate to enforce his views is not pertinent; more critical is his acquisition of informed authorty, whch must be earned by performance.
Frank Greenwood

20 **The Catalyst In Total Systems**
Activities in data communications are bound to result in the same kind of growth curve for it during the sixties that the computer field experienced in the fifties.
Rudolph Borchardt

32 **Two Paths Diverge . . .**
If the non-EDP systems man adapts himself to the "new man" with the computer, his future is bright and full of promise; if he chooses to stay apart yet equal to EDP, he must generate a new growth in the traditional area.
R. Lee Paulson

38 **Participative Management And Two-Way Communication**
Successful downward communication can and should be a function of the success of upward communication; both are necessary for the growth of employee participation in management decisions.
Robert Reeves

44 **Forms Control—A Reappraisal**
Computerized methods of data handling notwithstanding, the forms expert can be even more valuable than he was ten years ago—if he knows his stuff.
Ray Marien

July–August

10 **Information Systems In Marketing**
The lack of adequate information handling techniques in the marketing function demonstrates the failure of systems men to deal more than superficially with the "total" corporate enterprise.
Belden Menkus

16 **With The Masters: Henry L. Gantt**
Aside from formulating of the chart that bears his name, the engineer is also well known as an author, inventor and progenitor of the task and bonus plan.

23 **Are Maintenance Contracts Essential?**
By eliminating office equipment service agreements, companies may incur substantial savings; the author shows how it was done for his firm.
Harold B. Ward

28 **The Mathematical Theory Of Inventory Control**
Here is an elementary but analytical method of evaluating factors leading to the formulation of sound inventory control systems.
Philip A. Greco

38 **Computer-Prepared Financial Statements**
A new concept in account coding makes corporate guidance possible by outlining a growth pattern to follow.
William Isaacs, Walter E. Trask, Stan J. Gondek, Glenn M. West

44 **The Work Design Approach to Systems**
There is another and better set of assumptions and another approach to the study of work which will eliminate current restrictions.
Gerald Nadler

September–October

12 **Take A Tip From A Taskmaster**
Like the industrial engineer, the systems analyst must be guided by sound principles and practicable and worthwhile objectives.
Michael R. Nadurak

16 **When To Cut The Project**
The systems man must dig into a job quickly, secure as much of a potential saving as possible, then pull out and move on to the next cost-priority project.
R. E. Steere

20 **You Can't Have Your Cake And Eat It!**
Do-it-yourself information processing via today's techniques foregoes the frosting.
Robert H. Long

26 **Expeditious Reporting:**
Its effect on management decision making is examined in this article. The author answers several pertinent questions and proposes some techniques for future guidance.
Alan G. Negus

30 **Peripheral Data Processing**
Its contribution to management systems by giving management actual overnight reporting is described by the author.
Charles F. Winter

36 **Toward Complete Management Information Systems**
"We are going to see a far greater appreciation by management that EDP systems by themselves are not the solution to the problem of obtaining the necessary information."
Ken T. Bement

39 **An Integrated System**
Four sequential steps were involved in the development of a complete system at California's Jet Propulsion Laboratory.
J. H. Wiggins

40 **The Case For Plain Speaking**
Since he is in the simplification business, the systems man is the logical choice to cut through foggy communications.
Brian V. Rothery

November–December

12 **Whys And Wherefores Of The Mechanization Proposal**
Because advances in data processing will continue at an amazing rate, a review of mechanization studies is in order.
Melvin B. Levitt

18 **With The Masters: Herman Hollerith**
The inventor of the Electric Tabulating System, which virtually revolutionized compilation of the U.S. census, was a quiet man who let his achievements speak for him.

30 **Are Systems Men Industry's Displaced Persons?**
You may never be president or even vice president since the boss you please may not have some place to put you. On the other hand, someone has to fill these slots. What are the systems man's chances?
John T. Leslie

35 **The Dynamics Of The Authority Process**
The systems man, in order to maximize his objective, must rely on all sources of authority and acceptance available.
Elizabeth M. Gardy

38 **Analyzing Total Systems**
All past efforts have enabled us to hold the line on managed costs. Today, we must make a significant breakthrough in the reduction of these costs.
Charles J. Berg Jr.

42 **The Environmental Complex Of Data Discipline**
"A careful review of day-to-day data operations will reveal a discipline of action and reaction that forever continues and renews itself."
Lawrence C. Carey

45 **Open Door On EDP**
The time has come for EDP departments to stop hiding behind the barrier of technical terminology. Here's how their operations can be brought out into the open.
E. Joseph Dorzweiler
